

## LAB PROGRAM-01

Create a topology consisting of three or more device connected with help of a hub and a switch

```
10.0.0.1
Physical Config Desktop Programming Attributes
Command Prompt
Cisco Packet Tracer PC Command Line 1.0
C:\>ping 10.0.0.2
Pinging 10.0.0.2 with 32 bytes of data:
Reply from 10.0.0.2: bytes=32 time=21ms TTL=128
Reply from 10.0.0.2: bytes=32 time<1ms TTL=128
Reply from 10.0.0.2: bytes=32 time<1ms TTL=128
Reply from 10.0.0.2: bytes=32 time<1ms TTL=128
Ping statistics for 10.0.0.2:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 21ms, Average = 5ms
C:\>
```

## LAB-01

LAN :- A series of computers linked together to form a network is a circumscribed location.

WAN :- A computer network that connects smaller networks that is not tied to a single location.

Ethernet :- A system for connecting a no of computers systems to form a LAN with protocols to control the passing of information b/w systems.

IP address :- A unique string of characters that identify each computer using the internet protocol to communicate over a network.

Hub :- Hub is a node that broadcasts data to every computer or Ethernet based device that is connected to it.

Switch :- It connects devices in a network to each other enabling them to talk by exchanging data packets.

Server :- It connects is a computer program or device that provides a service to another computer program and its user known as client.

End device :- Are either the source or destination of data transmitted over the network.

Node :- The connection point among network devices such as routers, printers or switches that can receive and send data from one end point to another.

### Packet tracer :-

1. Add PC and server from end devices
2. Connect them with copper cross over
3. Set PC ethernet IP address as 10.0.0.1 and DNS server address as 10.0.0.2
4. Set Server ethernet IP address as 10.0.0.1
5. Services → DNS → Name : WWW first com  
Address : 10.0.0.2  
Add

### Observation :-

Click on PC in real time → desktop → Command prompt Command :

ping 10.0.0.2

pinging 10.0.0.2 with 32 bytes of data :

Reply from 10.0.0.2 : bytes = 32 time = 0ms TTL = 128

Reply from 10.0.0.2 : bytes = 32 time = 0ms TTL = 128

Reply from 10.0.0.2 : bytes = 32 time = 0ms TTL = 128

Reply from 10.0.0.2 : bytes = 32 time = 0ms TTL = 128

ping statistics for 10.0.0.2 :

packets : sent = 4. Received = 4 , Loose = 0 (0% loss)

Approximate round trip times in milliseconds

Minimum = 0ms , Maximum = 0ms , Average = 0ms

Lab - 01

Create a topology consisting of three or more device connected with help of a hub and help of a switch.

Steps involved :-

Step 1 :- Drag and drop 3 generic PC's and a generic switch. Connect 3 pc's as peripherals to the switch after setting the IP address as 10.0.0.1, 10.0.0.2 and 10.0.0.3 for PC1, PC2, PC3 respectively and connect them.

Step 2 :- Drag and drop 3 more generic pc's and a generic hub. Set the IP address of PC4, PC5 and PC6 as 10.0.0.4, 10.0.0.5 and 10.0.0.6 respectively connect all the three 3pc's to the hub.

Scenario 1 :-

Step 3 :- Turn on the switch and send a PDU from PC1 (10.0.0.1) to PC2 (10.0.0.2) via switch.

Scenario 2 :-

Step 4 :- Send a PDU from PC4 with ip address 10.0.0.4 to PC6 with IP address 10.0.0.6 via hub. Hub will send PDU to every pc connected to it. PC6 will acknowledge and receive it.

Scenario 3 :-

Step 5 :- Connect switch and hub. Send a PDU from PC1 with IP address 10.0.0.1 to PC6 with IP address 10.0.0.6 via switch and hub.

### Command prompt

PC > ping 10.0.0.6

Pinging 10.0.0.6 with 32 bytes of data :

Reply from 10.0.0.6 : bytes = 32 time = 6ms TTL=128

Reply from 10.0.0.6 : bytes = 32 time = 6ms TTL=128

Reply from 10.0.0.6 : bytes = 32 time = 6ms TTL=128

Reply from 10.0.0.6 : bytes = 32 time = 6ms TTL=128

ping statistics for 10.0.0.6

packets : Sent = 4, Received = 4, lost = 0 (0% loss)

Approximate round trip times in milliseconds :

Minimum = 5ms, Maximum = 6ms, Average = 6ms

58.16.12

### Topology with switch

### Topology with Hub and switch
